

Bona Wax Oil Refresher

Technical data sheet

Finishing

Bona Wax Oil Refresher is a maintenance product for Bona Hard Wax Oil but can also be used on Bona Craft Oil, for increased protection against water and spills. Bona Wax Oil Refresher consists of a concentrate of natural oils and waxes containing less than 2% solvents.

- Rapid drying and easy to apply
- Low solvent content and low odour
- Safe for application on children's toys and countertops, EN 71-3 compliant

Total consumption:	Approx. 50-80 m ² /litre depending on wood type
Safety:	Unclassified
Fire risk:	Non flammable. Risk of self ignition, see safety data sheet for more information.
Cleaning:	Clean tools with white spirit. Dried material can be removed with white spirit.
Shelf life:	3 years, from the date of production, in unopened original container
Storage/transport:	The temperature must not fall below +5°C or exceed +25°C during storage and transport.
Disposal:	Wastes and emptied containers should be handled in accordance with local regulations.
Sizes:	12 x 1 litre

Preparations

If necessary, the previously oiled/hard wax oiled surface must be thoroughly cleaned using Bona Soap or the Bona Deep Clean System and allowed to dry before applying Bona Wax Oil Refresher. Allow product to reach room temperature and shake the container thoroughly before use. **Minimum temperature for use is 16°C.**

Application

1. Apply the Wax Oil Refresher thinly using a Bona WoolPad or a stainless steel trowel.
2. Remove surplus Wax Oil Refresher with cotton cloths straightaway and let dry min 12 h, expect longer drying time on exotic wood and at low temperatures.

WARNING: BONA WAX OIL REFRESHER CONTAINS DRYING OILS. RISK OF SELF-IGNITION. USED CLOTHS, RAGS AND SIMILAR SHOULD BE PLACED IN WATER OR SEALED METAL CONTAINERS.

Maintenance

Clean the floor regularly using a dry mop and/or a vacuum cleaner. When needed, wipe off with a damp mop with Bona Soap added to the cleaning water. Always clean using as dry a method as possible. Apply Bona Wax Oil Refresher frequently to ensure that the pores of the surface remain saturated and unable to pick up dirt and moisture. The frequency of this operation is determined by the level of wear and may range from every 3rd year in a domestic environment to a few times a year in a commercial setting.
